

CISC-327 group-51 readme first

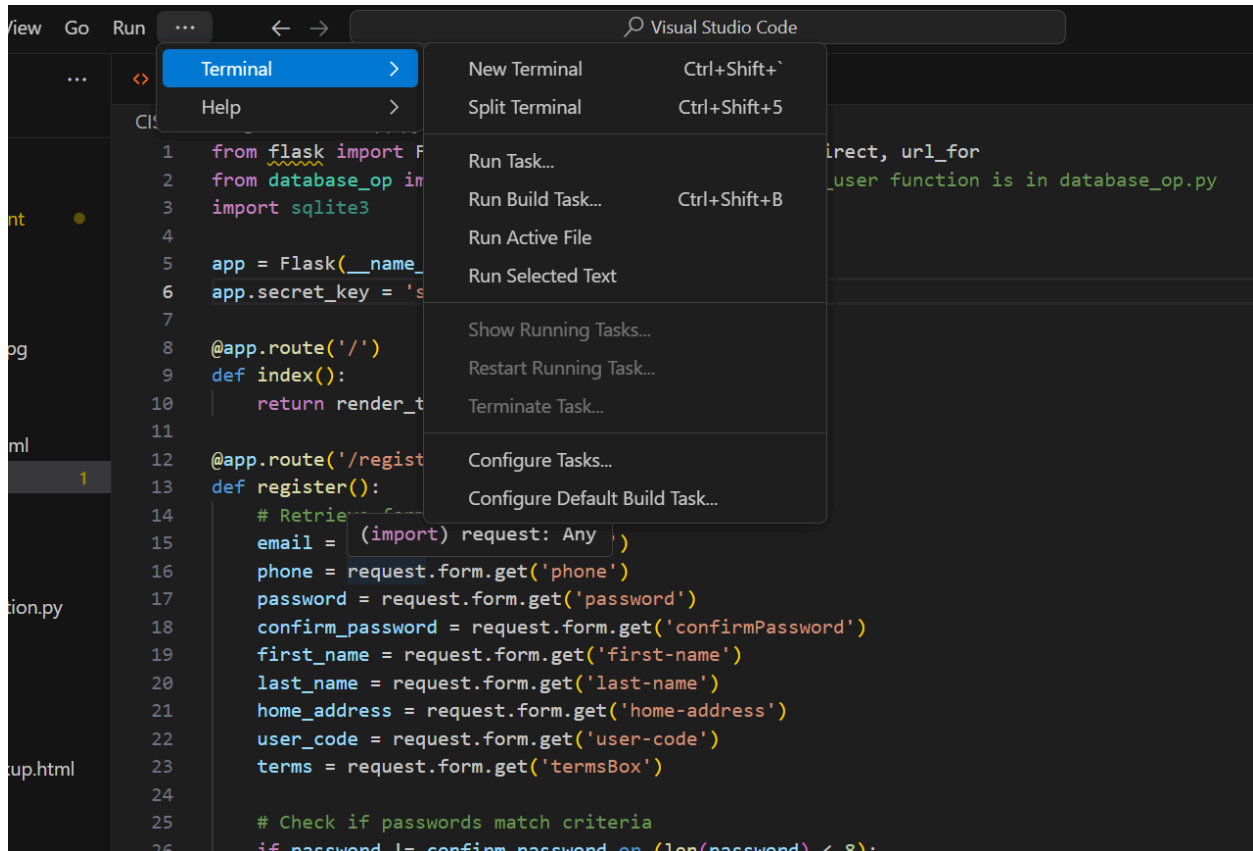

<http://127.0.0.1:5000> leads to sign up page

<http://127.0.0.1:5000/login> leads to log in page

<http://127.0.0.1:5000/payment> leads to payment page

### How to run the flight Booker page

- Start a new terminal

- Make sure that Flask is installed, if not run “pip install Flask”
- Make the current directory to where the app.py is found. Run the app.py by running “python app.py”

- Copy the link given and paste it onto your local browser

```
PROBLEMS 1 OUTPUT DEBUG CONSOLE TERMINAL PORTS
PS C:\Users\steve\OneDrive\Documents\Visual Studio Code> cd .\CISC327_
PS C:\Users\steve\OneDrive\Documents\Visual Studio Code\CISC327_assign
* Serving Flask app "app" (lazy loading)
* Environment: production
  WARNING: This is a development server. Do not use it in a production
  Use a production WSGI server instead.
* Debug mode: on
* Restarting with watchdog (windowsapi)
* Debugger is active!
* Debugger PIN: 141-441-094
* Running on http://127.0.0.1:5000/ (Press CTRL+C to quit)
```

- The link will take you to the registration page, to test the other pages:
- <http://127.0.0.1:5000/login> will take you to the login page
- <http://127.0.0.1:5000/payment> will take you to the payments page
- You can test the registration page by adding information as you would normally and clicking register
- To create a test case for registration, copy the skeleton code and fill in or remove information as needed.
  - Keep in mind that the assert message must match the one given in the app.py as well. I.E depending on the testing case.

```
4
5 def test_case_registration(self):
6     result = self.app.post('/register', data={
7         'email': self.generate_random_email(),
8         'phone': self.generate_random_phone(),
9         'password': 'password123',
10        'confirmPassword': 'password123',
11        'first-name': 'John',
12        'last-name': 'Doe',
13        'home-address': '123 Queen Street',
14        'user-code': '123456',
15        'termsBox': 'on'
16    })
17    self.assertIn(b'Error/Success message', result.data)
```

- After running the test\_app\_registration.py, the results should look like this

```
[Done] exited with code=1 in 0.677 seconds

[Running] python -u "c:\Users\steve\OneDrive\Documents\Visual Studio Code\CISC327_assignment\test_app.py"
C:\Users\steve\anaconda3\lib\site-packages\flask\json\_init_.py:211: DeprecationWarning: Importing 'itsdangerous.json' is deprecated and will be removed in ItsDangerous 2.1. Use Python's 'json' module instead.
  rv = _json.dumps(obj, **kwargs)
.....User added successfully.
C:\Users\steve\anaconda3\lib\site-packages\flask\app.py:2113: DeprecationWarning: 'BaseResponse' is deprecated and will be removed in Werkzeug 2.1. Use 'isinstance(obj, Response)' instead.
  elif isinstance(rv, BaseResponse) or callable(rv):

OK

[Done] exited with code=0 in 0.683 seconds
```

- After successful registration, you'll be taken to the login page
- To test the login page, you can try logging in with the information you just registered with. Another option is to log in using some of the information that has already been saved in the database:  
email: "[hassan@gmail.com](mailto:hassan@gmail.com)" password: "password123"  
email: "[steven@gmail.com](mailto:steven@gmail.com)" password: "password123"  
email: "[anwar@gmail.com](mailto:anwar@gmail.com)", password: "password123"
- After successfully logging in, you'll be taken to the payments page
- To test payments: all the payment methods are saved in payments.db, if for any reason payment database is compromised or it doesn't exist, delete the corrupted db file and run init\_payments.py by running the code "python init\_payments.py" to recreate it and in the database, the following payment methods are saved (note that name is written in lowercase with no space, this is to make sure that names are interpreted properly when submitted, therefore, names such as John Smith, JohnSmith, john smith are all accepted): use these payment methods in the payment page are used to test cases, and real users can use these to simulate purchasing the ticket

method	card number	expiration date	CVC	name	country	balance

### To run the test cases for flight booker

- Make sure you're in the parent folder of the directory (should be assignment-3 in this case)
- Run the command: **python -m unittest discover -s tests** to test all the test cases in one go
- Or to run them individually for each feature, use these commands:
  - **python -m unittest discover -s tests -p "test\_login.py"**
  - **python -m unittest discover -s tests -p "test\_payment.py"**
  - **python -m unittest discover -s tests -p "test\_registration.py"**

```

OK
● (base) hassan@MacBookAir Assignment-3 % python -m unittest discover -s tests
