CISC 327 GROUP-51 task distribution

Sungmoon Choi:
- Assignment 2
  - Made both the program and test cases for the payment feature.
- Assignment 3
  - Created initial payments.db and init_payments.py to create a database file needed backend payment checking
  - Updated frontend page for payment screen to match what was initially drawn for design in assignment 1
  - Added database functionality to the payments feature
  - Updated payment page to include buttons and interactable texts for users to navigate to different pages
- Assignment 4
  - Identified the missing statements and the reasoning for the payment page in app.py as well as the cancel button redirect
  - Modified the test_payment.py to cover all the missing statements and document the changes made
  - Reported necessary comments on false missing statements in coverage and ensuring necessary lines are exempt from coverage testing
- Assignment 5
  - Created integration test for logging in, canceling payment, logging back in, and payment
  - Recorded the result of the integration test
  - Wrote the instructions to run the integration test
- Assignment 6
  -

Steven Guan:
- Assignment 2
  - Made the program, frontend and test case for registration.
- Assignment 3
  - Created initial mydatabase.db for the registration of user, updated frontend to look more like the original UI mockup

- ○ Created database_op.py
  - ○ Updated test cases to suit new features
- Assignment 4
  - ○ Modified the test_registration.py to cover all the missing statements and document the changes made.
  - ○ Reported each individual function in test_mydb.py and elaborated on why there was no initial testing file for database operation and initialization.
  - ○ Provided screenshots for coverage testing from before and after implementation/update of coverage oriented test cases
- Assignment 5
  - ○ Created integration test for successful registration, logging in and payment
  - ○ Added explanation to their test case (test 3) in the 327 Integration Test report document
  - ○ Contributed to the instructions to running the test_integration.py
- Assignment 6
  - ○

Hassan Hamid:
- Assignment 2
  - ○ Designed frontend, program and test cases for login feature.
- Assignment 3
  - ○ Combined the three project features that were previously separated into one app and made sure they worked together as expected
  - ○ Added database functionality to login feature by connecting it with mydatabase.db
  - ○ Added functions to database_op.py
  - ○ Updated test cases to work together with the database
- Assignment 4
  - ○ Identified the missing statements in app.py related to checking if the root route is redirected to the registration page correctly.
  - ○ Updated test_login.py to test for the missing statement above.
  - ○ Created test_mydb.py to test for the missing statements related to database_op.py and init_tables.py

- Assignment 5
  - Created integration test for incorrect login information, correct login information, and successful payment
  - Recorded the results of this integration test
  - Helped debug code to allow the three integration tests to work together
- Assignment 6
  -
